## Tallie

Tallie is truly end-to-end business software, from receipt image capture all the way through any company's back-end system. Tallie intelligently scans, categorizes and matches receipt and credit card data, automatically generates expense reports, and seamlessly pushes data into financial accounting systems. It allows automatic and selective transaction import from multiple credit cards. To ensure data integrity, drive usage and control fraud, Tallie includes a suite of compliance (policies, groups, multi-level approval routing), internal control (duplicate identification, project accounting, general ledger mapping), and analytics tools.

Tallie's expense management software completes a powerful paperless and highly efficient client accounting ecosystem. While Tallie virtually integrates with all accounting software systems, we are also the first and only expense report solution to offer seamless, bi-directional integration with Bill.com. This cloud-based integration features deep, real-time data synchronization in all critical expense data: account, customer, vendor, item, and class. This ensures that your expense and billing data are always up to date, no matter the system you are using.

Companies waste 40% of their time on accounts payable driven by corporate expense management. Tallie simplifies this process by offering the quickest path from receipt to balance sheet. Our software eliminates over 60% of processing time for both the front and back-end, providing time and cost savings. At its core, Tallie captures expense data from a variety of sources, minimizing the need for data entry. On a higher level, Tallie sets the standard in terms of depth of integration, ease of synchronization, and reliability of support across multiple systems.

In combination with other partners (Bill.com, SmartVault, Right Networks, BMRG, and RootWorks to name a few) Tallie completes an ecosystem of software solutions that seamlessly work together to streamline the entire expense management

workflow, and better position the financial applications industry towards a model of
