Here are some best practices taxpayers can follow to protect their tax and financial information:

- **Understand and Use Security Software.** Security software helps protect computers against the digital threats that are prevalent online. Generally, the operating system will include security software or you can access free security software from well-known companies or Internet providers. Essential tools include a firewall, virus/malware protection and file encryption if you keep sensitive financial/tax documents on your computer. Do not buy security software offered as an unexpected pop-up ad on your computer or email. It's likely from a scammer.
- **Allow Security Software to Update Automatically.** Set security software to update automatically. Malware – malicious software – evolves constantly, and your security software suite updated routinely to keep pace.
- **Look for the “S.”** When shopping or banking online, always look to see that the site uses encryption to protect your information. Look for “https” at the beginning of the web address. The “s” is for secure. Unencrypted sites begin with an http address. Additionally, make sure the https carries through on all pages, not just the sign-on page.
- **Use Strong Passwords.** Use passwords of eight or more characters, mixing letters, numbers and special characters. Don't use your name, birthdate or common words. Don't use the same password for several accounts. Keep your password list in a secure place or use a password manager. Don't share passwords with anyone. Calls, texts or emails pretending to be from legitimate companies or the IRS asking to update accounts or seeking personal financial information are almost always scams.
- **Secure Wireless Networks.** A wireless network sends a signal through the air that allows it to connect to the Internet. If your home or business Wi-Fi is unsecured, it

also allows any computer within range to access your wireless and potentially

address to ensure that the information will be secure.

- **Avoid E-mail Phishing Attempts.** Never reply to emails, texts or pop-up messages asking for your personal, tax or financial information. One common trick by criminals is to impersonate a business such as your financial institution, tax software provider or the IRS, asking you to update your account and **providing** a link. Never click on links even if they seem to be from organizations you trust. Go directly to the organization's website. Legitimate businesses don't ask you to send sensitive information through unsecured channels.
