Easy Data Access (EDA) recently announced the release of the Professional Edition of its Docsvault document management software, which is geared toward individual professionals and Small Office/Home Office (SOHO) businesses, helping them to effectively organize, manage, and secure their paper and data files.

The Professional Edition includes the document management software in addition to an ensemble of business applications. With an interface that resembles Windows Explorer, Docsvault includes features such as integrated scanning and PDF creation capabilities and one-click CD/DVD burning, along with full data-backup settings, helping protect against data loss.

“Previously, the high cost and complex functionality of document management systems limited single-users and professionals from taking advantage of this technology,” said Ketul Patel, Easy Data Access President and CTO.

“Professional users, as well as home users, require adaptive solutions designed to meet their individual needs, without the IT hassle or expense. With the release of Docsvault Professional Edition, the SOHO industry now has a cost-effective and feature-rich DMS solution to become more organized, more productive, and decidedly more efficient.”

The single-user Professional Edition is available now for \$49.99 from EDA's web site. The multiple-user SMB (Small- and Medium-sized Business) Edition will be released in the fourth quarter of 2006.
