Feb. 02, 2011

HOUSTON, TX – [SmartVault](#),

a leading provider of Software as a Service (SaaS) document storage and sharing solutions, today announced the latest release of SmartVault—version 3.3.

The new release focuses on additional security and compliance features and streamlining

the user interface to enhance SmartVault's foundation for providing an easy-to-use solution for storing and sharing documents in the Cloud. Enhancements are a direct result of customer feedback and suggestions.

SmartVault has built a reputation around its uniquely integrated plug-in for QuickBooks, which offers customers a seamless experience for scanning, uploading, and finding documents within a familiar application. In 2009, SmartVault expanded its service offering beyond the QuickBooks user to provide file storage and file sharing capabilities for all business documents—providing a single solution to securely store, view, and exchange files. SmartVault v3.3 represents an upgrade in the service's proven functionality, while new security and compliance features further streamline the user experience.

“With this release, we've taken customer feedback and applied what we learned to elevate the system's overall usability,” said Eric Pulaski, founder and CEO of SmartVault. “Whether they are small changes to the interface to improve usability or new features that enhance the service, we have a culture at SmartVault of iterating very quickly to improve the user experience for our customers. We have to earn our customer's business every month, and it is our job to provide them ongoing value to the SmartVault service.”

New and enhanced features in SmartVault v3.3 include:

- **User Activity Logs**—Offers customers the ability

- **Link to any file or folder in SmartVault and add it to their desktop, embed in a file, or paste into an outgoing email.** This offers users the option to use their own email system to send a link to a file in SmartVault, rather than through the “Send Link” option in the SmartVault Portal.
- **Create a Vault from a SmartVault Mapped Drive**—Enables users to create vaults (in addition to folders) directly from their SmartVault Drive. Previously, users could only create vaults from the SmartVault Portal.

This release also includes more than a dozen enhancements to existing SmartVault features, such as making it easier to personalize email messages when sharing documents and folders with existing users and the ability to intuitively create Desktop shortcuts for easy access to core service components.

SmartVault version 3.3 is available now. The new release will be delivered to current SmartVault customers at no additional charge. For information on plans and pricing or to start a free 30-day trial, visit [www.smartvault.com](http://www.smartvault.com).
