XpandedReports, developers of the browser-based reporting add-on application which integrates with QuickBooks, recently announced smart integration with SmartVault, providers of Cloud-based document storage and file sharing solutions. Integration between systems leverages XpandedReports and SmartVault's bi-directional integration with QuickBooks to deliver a single, streamlined solution that shares a single document management platform. For users, this means that they can save reports directly to SmartVault from XpandedReports and share reports with others easily and securely.

For firms that have invested in Cloud solutions, this integration offers another option to "connect" advanced web-based solutions and create streamlined systems that support highly efficient workflow processes. The integration between XpandedReports and SmartVault provides users with a single document management platform where files can be accessed across multiple applications and web-enabled devices. This is critical in today's mobile world, and marks another big step in the right direction for the profession.

For more information on XpandedReports and SmartVault integration, visit <http://xpandedreports.com/smartvault>.
