Wasp Barcode Technologies has released InventoryControl version 7, a complete inventory tracking solution for small and medium-sized businesses. Wasp InventoryControl version 7 is available in three editions: Standard, RF Professional, and RF Enterprise.

Apr. 23, 2013

Wasp Barcode Technologies has released InventoryControl version 7, a complete inventory tracking solution for small and medium-sized businesses. Wasp InventoryControl version 7 is available in three editions: Standard, RF Professional, and RF Enterprise.

Wasp Barcode, which is a provider of small business productivity solutions, said it was responding to the number one customer-requested inventory management feature: the QuickBooks Connector Module for InventoryControl version 7. The ability to reconcile inventory and accounting systems with this integrated platform empowers small businesses to more effectively plan, execute and optimize their operations.

According to Wasp Director of Marketing Brian Sutter, "Integrating InventoryControl with QuickBooks, the number one small business accounting software on the market, avoids data duplication between systems & provides a feature-rich solution typically reserved for larger businesses."

In addition to QuickBooks compatibility, InventoryControl version 7 comes with many additional enhancements, including:

- The ability to schedule and receive email alert notifications
- Mass update customer and inventory records
- Enhanced security features and permission controls

- Drop ship support & advanced forecasting tools

mobile device and barcode printer. The option to integrate InventoryControl data with Quickbooks via the connector Module requires implementation assistance from a Wasp Certified Implementation Partner. Support for the Quickbooks integrated solution is still available from Wasp and is complimentary during the first year.
