The UPS Store is testing the [Stratasys uPrint SE Plus printer](#) at select locations. The printer is designed to print detailed objects more accurately than home 3D printers. Stratasys notes that this is particularly important when parts need to fit into each other or fit some other object. With this printer, *The UPS Store* locations will be equipped to produce items like engineering parts, functional prototypes, acting props, architectural models and fixtures for cameras, lights and cables.

In addition, *The UPS Store* locations offer a range of services tailored to meet the needs of small businesses, such as packing and shipping, printing, faxing, direct mail and mailbox services. *The UPS Store* locations will also work with business owners to develop custom solutions to meet their unique business needs.

Small Business
