Strategy

Some taxpayers who have spent the last few years trying to avoid the alternative minimum tax (AMT) might try a novel approach in 2015: They might actually increase their AMT liability. This could be the optimal approach after you've conducted an ...

There are several critical differences between the two calculations. With the regular income tax system, you add up your client's total income, subtract various deductions to find the amount of taxable income and then calculate the tax. The seven-rate graduated tax structure features a low of 10% and a high of 39.6%. The client's tax liability may be reduced still further though tax credits.

Conversely, the AMT calculation is based on a different income computation and just two tax rates. In brief, you arrive at AMT liability by making various adjustments and adding back certain items into income, including so-called "tax preference items, then subtracting an AMT exemption based on filing status, and finally multiplying the result by the appropriate tax rate.

Although the AMT exemption amounts have increased slightly over recent years, the upticks still don't make a big enough dent for many taxpayers. For example, the exemption amounts for 2015 are \$53,600 for single filers, \$83,400 for joint filers and \$41,700 for marrieds filing separately. Furthermore, these exemption amounts are reduced for upper-income taxpayers. The reduction in 2015 is equal to 25 cents for each dollar of AMT income above \$119,200 for single filers, \$158,900 for joint filers and \$79,450 for marrieds filing separately.

The lower AMT tax rate of 26% applies to AMT income up to \$185,400 in 2015. The higher 28% AMT rate is used for amounts above the \$185,400 threshold.

When you meet with a client at year-end, your preliminary analysis may indicate that a slight change in the way the client does things, such as delaying or omitting certain tax preference items, can reduce or even eliminate AMT liability. But frequently the client won't be able to completely avoid the AMT this year. In that case, consider the following "radical" solution.

Instead of trying to postpone taxable income, as is often recommended, you might

Bottom line: Don't make assumptions either way. Crunch the numbers at year-end to see where your client stands. Then you can explain the available options and proceed accordingly. The client will have to pay tax one way or the other, but you can minimize the damage.
