Thomson Reuters has added a new Leasing Data Functionality feature to Thomson Reuters ONESOURCE Property Tax, the web-based, industry-leading property tax software solution. The added functionality streamlines the data import process for

leasing customers and facilitates reconciliation, which can drastically reduce the risk

Key new features include:

- **Leasing specific application settings** that automate location ID and account setup, allowing users to easily change settings and better control how locations and accounts are created and filed.
- **Enhanced asset import options** that allow the import of asset data with related location and lessee data within a single import file, as well as added efficiencies of address normalization and assessing jurisdiction lookup.
- **Location and lessee/lessor comparison** that uses normalized address information to monitor asset movement, removing the users' responsibility to manually analyze asset movement.

Leasing Data Functionality is available now as part of ONESOURCE Property Tax. For more information, visit:
