Sales & Use Tax

Insight: Keeping up with state and local taxes can be simple for the smallest of businesses, but can also quickly grow cumbersome and complex, depending on nexus and many other factors, including sales tax holidays. For businesses that sell to customers across many states, the challenge can be too much to keep up with manually. That's where sales tax compliance systems come in, helping track and manage compliance on a state-by-state basis, or for all of the 8,000 or so taxing jurisdictions across the country. About 40 percent of this year's voters had a preference in this category, with the majority saying they use the websites of state taxing authorities to report sales taxes. For those who use a technology solution, the following products ranked best: WINNER: CFS Tax Software (30.5%)

• Thomson Reuters ONESource Indirect Tax (24.5%)

Tax Document Automation

Insight: Twenty years ago, a seasoned tax professional could maybe handle 100 returns during the entire tax season, but with automation, some individual tax pros handle several hundred. The key productivity benefits of tax automation systems is getting a client's engagement materials into an electronic version, then being able to manage the workpapers, import it into tax forms, and collaborate with the client throughout their engagements. No more cumbersome file cabinets with client documents.
