The Internal Revenue Service has issued a new consumer alert for e-mail schemes after seeing an approximate 400 percent surge in phishing and malware incidents so far this tax season.

The emails are designed to trick taxpayers into thinking these are official communications from the IRS or others in the tax industry, including tax software companies. The phishing schemes can ask taxpayers about a wide range of topics. E-mails can seek information related to refunds, filing status, confirming personal information, ordering transcripts and verifying PIN information.

Variations of these scams can be seen via text messages, and the communications are being reported in every section of the country.

“This dramatic jump in these scams comes at the busiest time of tax season,” said IRS

and other personal information. The sites also may carry malware, which can infect people's computers and allow criminals to access your files or track your keystrokes to gain information.

The IRS has seen an increase in reported phishing and malware schemes, including:

- There were 1,026 incidents reported in January, up from 254 from a year earlier.
- The trend continued in February, nearly doubling the reported number of incidents compared to a year ago. In all, 363 incidents were reported from Feb. 1-16, compared to the 201 incidents reported for the entire month of February 2015.
- This year's 1,389 incidents have already topped the 2014 yearly total of 1,361, and they are halfway to matching the 2015 total of 2,748.

“While more attention has focused on the continuing IRS phone scams, we are deeply worried this increase in email schemes threatens more taxpayers,” Koskinen said. “We continue to work cooperatively with our partners on this issue, and we have taken steps to strengthen our processing systems and fraud filters to watch for scam artists trying to use stolen information to file bogus tax returns.”

As the email scams increase, the IRS is working on this issue through the Security Summit initiative with state revenue departments and the tax industry. Many software companies, tax professionals and state revenue departments have seen variations in the schemes.

For example, tax professionals are also reporting phishing scams that are seeking their online credentials to IRS services, for example the IRS Tax Professional PTIN System. Tax professionals are also reporting that many of their clients are seeing the e-mail schemes.

As part of the effort to protect taxpayers, the IRS has teamed up with state revenue departments and the tax industry to make sure taxpayers understand the dangers to

their personal and financial data as part of the “[Taxes. Security. Together](#)” campaign.

The IRS has information online that can help protect taxpayers from email scams.

Phishing and malware schemes again made the IRS “Dirty Dozen” tax scam list this year. Check out the last [IRS Phishing Scam](#) news release for more info.

What to look for in these scams

Taxpayers receive an official-looking email from what appears to be an official source, whether the IRS or someone in the tax industry.

The underlying messages frequently ask taxpayers to update important information by clicking on a web link. The links may be masked to appear to go to official pages, but they can go to a scam page designed to look like the official page. The IRS urges people not to click on these links but instead send the email to phishing@irs.gov.

Recent email examples the IRS has seen include subject lines and underlying text referencing:

- Numerous variations about people’s tax refund.
- Update your filing details, which can include references to W-2.
- Confirm your personal information.
- Get my IP Pin.
- Get my E-file Pin.
- Order a transcript.
- Complete your tax return information.
