Mary Girsch-Bock • Mar. 19, 2018

Unless your firm or your clients operate on a cash only basis, an effective accounts receivable system is necessary for the success of the business; any business. Not only useful for managing invoices and outstanding balances, a solid accounts receivable system also helps track vital data such as customer payment history and credit worthiness. A solid accounts receivable system can ensure that not only are you aware of what exactly is owed your firm or your client's business, but that you can be proactive when offering credit or initiating collection activity on a past-due invoice.

Yes, an accounts receivable balance is considered a business asset, but it's only an

Successful business owners know that in order to remain successful, and in business, customers must pay their bills on a timely basis. A solid accounts receivable system offers a variety of features that can assist with that, including offering a discount for early payment, or the threat of a penalty if payment is received late. It also allows owners to issue credit memos, apply payments to numerous invoices, and even help determine credit worthiness.

That's why solid accounts receivable capability is an important component when looking to purchase accounting software for your business or your client's business.

In this issue, we took a long look at a variety of accounts receivable systems that are available in popular accounting software products. These products range in functionality from basic accounting suitable for the small business, to enterprise level applications, to those designed strictly for accounting professionals. We also looked at some supporting applications that are designed to bolster accounts receivable functionality in their current accounting application. While reviewing these products, we paid particularly close attention to a variety of features and functions that are vital to any accounts receivable application. These features include:

- Accounts receivable reports
- Application of payment to multiple invoices
- Audit trail
- Credit memos
- Customer credit limits
- Customer information levels
- Customer statements
- Electronic Payment Acceptance
- Finance charges

- Integration with core product
