companies authorized to provide legal cannabis services and products among the increasing number of states who have legalized marijuana for medical or recreational use.

Jan. 21, 2019

**Fishbowl** now meets the tracking and inventory management needs of people and companies authorized to provide legal cannabis services and products among the increasing number of states who have legalized marijuana for medical or recreational use.

Cannabis business owners need both specialized and broad-spectrum technology and software tools for their operations. **Cannabis tracking and inventory management** is especially relevant, and Fishbowl, an inventory management

software for QuickBooks, provides that capability whether companies use

Cannabis business owners in approximately 15 states where medical or recreational marijuana is legal use Fishbowl to meet their tracking and inventory needs.

“[Fishbowl Manufacturing](#) and [Fishbowl Warehouse](#) provide the strongest tracking and inventory management capabilities for tens-of-thousands of small to large businesses through the U.S. and around the globe,” said John David King, Fishbowl CEO. “Its capabilities also meet the specific needs of a growing number of businesses within the cannabis industry.”

- **Tracking.** Fishbowl utilizes barcode tracking for plant IDs as well as for lot numbers to reduce human error and increase efficiency. It tracks the presence, location and progress of cannabis within a facility. It can track from the seed to harvested plant and accounts for the cost of soil, potting, fertilizers and other supplies as needed.
- **Processing.** Once harvested, Fishbowl links the cannabis plant ID throughout the process. Everything is reverse lot traceable. Fishbowl tracks consumables, materials, and waste byproducts through the processing stages and can identify the quantity and loss through each stage helping to identify where the cannabis is, what is happening to it, and who is involved.
- **Completed goods.** After processing, the sellable cannabis goods are assigned a lot ID, which keeps track of the location and a history of the finished goods. Sales, losses and inventory movement and location are tracked.

In order to meet state and local reporting requirements, Fishbowl includes business intelligence technology designed to enhance reporting queries. It provides the creation of dozens of customized forms, labels or data reports depending on the specific reporting needs and requirements.

Fishbowl is available for any business currently and is especially suited to businesses
